DETAILED ACTION

1. Claims 4, 5, 9, 10, 14, 15, 19 and 20 are pending in the instant application.

Claim Objections

2. Claims 4, 5, 9, 10, 14, 15, 19 and 20 are objected to because of the following informalities:

Regarding claim 4, the following version of the claim is presented to overcome objections to the claim:

A reception data synchronizing apparatus for a synchronization to be obtained between reception data having a synchronism pattern for a synchronization to be obtained and expectation data as an expected value of the reception data, comprising:

a phase difference recording means for recording a time difference between a second synchronism pattern detecting timing at which the synchronism pattern is detected in the reception data and the a first synchronism pattern detecting timing, as an initial one at which the synchronism pattern is initially detected in the reception data;

a collation and synchronism decision means for collating the reception data with reference data to decide whether or not a synchronism timing of the reception data is consistent in phase with the reference data at the first synchronism pattern detecting timing; and

a timing generating means operative, when the collation and synchronism decision means gives a decision for inconsistency in phase, for shifting a the synchronism timing of the expectation data ~~from the synchronism pattern detecting timing, as the initial one, by the time difference recorded in the synchronism pattern detecting timing recording means.~~

Regarding claims 5, 9, 10, 14, 15, 19, and 20, the claims are objected to for the same reasons as applied to claim 4 above.

Appropriate correction is required.

Allowable Subject Matter

3. Claims 4, 5, 9, 10, 14, 15, 19, and 20 are indicated to contain allowable subject matter.

4. The following is a statement of reasons for the indication of allowable subject matter:

Claims 4, 5, 9, 10, 14, 15, 19 and 20 are indicated to contain allowable subject matter because the prior art of record does not disclose or obviate the claimed limitation of finding two synchronization timings and determining the accuracy of the first synchronization timing using a collation with actual reference data, wherein a phase shift between the first and second timings is applied if the collation finds an inconsistency in phase.

Conclusion

5. This application is in condition for allowance except for the following formal matters:

The claim objections above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following prior art not relied upon above is cited to further show the state of the art with respect to synchronizers.
